## **REASONS FOR ALLOWANCE**

1. The following is an examiner's statement of reasons for allowance:

Claims 1-16 are written in terms of means plus function. Therefore, claims 1-16 have been carefully considered in view of the specification according to 35 U.S.C. 112, sixth paragraph. The invention as claimed is directed into a servo controller for driving a servomotor based on command positions input by a master control unit. A learning control means is connected for creating correction data based on a position deviation in a same command pattern, storing the data in a memory, and correcting positional deviation, during the period from a learning control start command to a learning control end command. The references of the record fail to teach or suggest a learning control means for creating correction data based on a position deviation in a same command pattern, storing the data in a memory, and correcting positional deviation. In particular, the references of the record fail to teach or suggest a learning control means for creating correction data during the period from a learning control start command to a learning end command as recited in the claims in view of the description of the specification.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
